

5 everyday ways to work on number concepts

Play a board game with a dice. Recognising the number on the dice and counting spaces are both great skills to practise!

Go for a number walk. How many places can you see numbers? Older children could do a survey and tally chart of things they might see while on their walk such as different colour cars

Follow an easy recipe and let them do the weighing. Then work out how to fairly divide what you have made with the rest of the family!

Build a model together... how many bricks do you need? What size will fit in? How tall does it need to be?

Have a guessing competition! Estimating is a great skill. Find some objects to weigh or measure – a point for the child with the closest guess 😊
